

Netskope Named a Leader in the Gartner® Magic Quadrant™ for Security Service Edge for 5th Year in a Row

August 4, 2026

Underscoring its vision and execution, Netskope is again recognized as a Leader in Security Service Edge

SANTA CLARA, Calif., Aug. 04, 2026 (GLOBE NEWSWIRE) -- [Netskope](#) (NASDAQ: NTSK), a leader in modern security and networking for the cloud and AI era, today announced that Gartner, Inc. has recognized the company for the fifth consecutive year as a Leader in the Gartner Magic Quadrant for Security Service Edge (SSE). Netskope has been named a Leader in every year this report has been published since its inception, consistently recognized both for its vision and its ability to execute.

This recognition follows Netskope's being [named as a Leader in the related Gartner Magic Quadrant for SASE Platforms](#), where Netskope is cited as highest in ability to execute. Additionally, in the companion Critical Capabilities report for Security Service Edge, a comparative research report that scores competing technology products or services against a specific set of critical differentiators, Netskope is ranked among the two highest scoring vendors for all four category Use Cases.

Netskope helps organizations modernize by converging critical security, network, analytics, and AI products into a powerful, unified platform, Netskope One. The architecture of Netskope One applies zero trust principles and AI innovations to optimize access, protect data wherever it moves, adopt AI securely, stop threats, and enable secure, work-from-anywhere connectivity. Netskope One is powered by NewEdge, the private cloud infrastructure that underpins Netskope's delivery of security, networking, analytics, and AI services with fast inference and proven [low latency for AI use and agentic workflows](#), preventing traditional trade-offs between security and performance.

We believe Netskope's continued recognition as an SSE Leader reflects both the durability of its architecture and the pace of its innovation in AI security, agentic operations to automate SSE workflows, and unified data protection: capabilities that are increasingly central to how enterprises secure a workforce that now includes AI agents alongside people.

"Five years running, Gartner has recognized Netskope as a Leader in Security Service Edge, and I feel that consistency matters as much as this year's recognition itself," said Sanjay Beri, CEO and co-founder, Netskope. "Our customers are rearchitecting security and networking for a world where non-human identities such as AI agents, not just people, need secure access to data and applications. We built Netskope One so organizations don't have to trade security for performance, and this continued recognition tells us we're executing on that vision at speed and scale."
